SUMMARY

Computer engineering student with hands-on experience in Linux system administration, cloud/virtualization fundamentals, and technical problem-solving through software development projects. Strong analytical mindset developed through debugging, system configuration, and direct customer support experience. Seeking to apply these technical and problem-solving skills in an IT support role.

EDUCATION

Engineering Cycle in Computer Science, ITBS – IT Business School	2025 – Present Nabeul
Bachelor's Degree in Telecommunications, ISITCOM	2021 – 2025 Sousse

EXPERIENCE

Sofirux, Web Development Configured and maintained Symfony-based project environments following technical best practices.	08/2023 – 09/2023 Nabeul
UIB, Customer Service Representative - Diagnosed and resolved customer account and system-related issues on a daily basis. - Handled banking operations and account management procedures, requiring accuracy and attention to detail under time pressure. - Communicated technical/procedural information clearly to non-technical clients.	07/2023 – 08/2023 Nabeul
Booster BC, Web Development - Implemented secure authentication (JWT), password reset workflows, and user data protection mechanisms.	06/2024 – 07/2024 Mrezga, nabeul
Dundill, End-of-Studies Internship - Built and maintained a secure REST API infrastructure using MongoDB. - Designed a secure, scalable system architecture — including authentication, data protection, and access control.	12/2025 – 06/2026 Akouda, Sousse

PROJECTS

Student & Grade Management System, Python, Flask, SQLite - Implemented secure authentication and administered user roles and permissions.	04/2026 – 05/2026
Cloud & Virtualization - Studied cloud computing fundamentals (IaaS, PaaS, SaaS) and simulated virtual machine deployment and configuration.	01/2025 – 02/2025
Full-Stack Development (Node Farm), Front-End Web Application - Designed a dynamic interface in HTML, CSS, and JavaScript, generating product pages from structured JSON data.	07/2024 – 08/2024
Order Management System, Full-Stack Web Application - Built a cart management interface allowing users to add and modify items. - Stored data on Firebase with real-time updates via Redux.	02/2024 – 03/2024
AI Conversational Assistant, React · Node.js · MongoDB · Groq API - Configured JWT-based authentication and full user profile/session management. - Diagnosed and resolved integration issues across multilingual AI processing and file handling (PDF/image).	05/2026 – 06/2026
Social+, Social Network Platform - Built and secured a REST architecture (JWT) using PostgreSQL with real-time features via Socket.io  - Managed transactional data integrity for a token-based payment system.	06/2026 – 07/2026

 CERTIFICATES

Programmation & Data: Python Essentials I | Introduction to Python Programming | Intermediate Python | Exploratory Data Analysis in Python

Intelligence Artificielle: Generative AI Concepts | Understanding Prompt Engineering

Data & BI: Introduction to Power BI | Microsoft Copilot in Excel

Cloud & DevOps: DevOps Essentials – IBM / Coursera | Introduction to DevOps

 RELEVANT TECHNICAL SKILLS

Operating Systems: Ubuntu/Linux (daily use), Windows

Cloud & Virtualization: IaaS, PaaS, SaaS fundamentals; simulated virtual machine deployment

Networking & Security: JWT authentication, secure cookies, authorization protocols, API security

Databases: MongoDB, MySQL, SQLite, Firebase

Tools & Version Control: Git, GitHub

Troubleshooting: Debugging and issue resolution across full-stack applications (frontend, backend, database, deployment)
